**In The London boom in dental implants the qualified team at Travers Dental Practice continues to provide its clientele with a caring approach**

(Newswire.net -- July 22, 2013) [London](#), WC1N 1AG England UK -- With the global boom in [dental implants](#) the qualified team at Travers Dental Practice continues to provide its clientele with a caring approach to dentistry and provide them with ALL the treatment options currently available. Their practice reflects very high clinical standards.

“Richard and his team couldn’t have been more helpful, they were absolutely first class,” says Agnieszka Babka.

Over the years Travers Dental Practice has built a huge clientele and their customers are satisfied with the service they receive. “The whole process was painless and pleasant and I shall never fear the dentist chair again,” said Johnnie Mousicos.

Laura Bird described her experience in a similar light, “As an anxious patient, you made the unbearable, bearable, thanks again.”

At Travers Dental Practice they also work together with ophthalmologists and other medical practitioners for ‘tooth in eye’ surgery. ‘Tooth in eye surgery’, restores the vision of patients with the most severe, end-stage forms of corneal blindness that are not amenable to corneal transplantation or other forms of surgery. The role of dentists is to select a tooth for use and decide on one depending on the length, width of the root and surrounding alveolar bone. The selected tooth must have healthy dentine and buccal tissues. While the procedure of extracting the tooth along with alveolar bone still remains technically difficult, the dentists at Travers Dental Clinic are specially trained.

About [Travers Dental Practice](#): Having been in existence for almost 20 years this family practice is a practice where patients (both adults and children) receive the latest dental and cosmetic treatments in comfortable surroundings. Their practice reflects very high clinical standards.

They provide preventative care and support to help busy adults and their families maintain their dental health and avoid problems. They encourage their patients to anticipate potential problems and eliminate the factors that cause dental disease. Their focus is helping people become and stay healthy while simultaneously improving their appearance. They focus on restoring health and stability with dentistry that is appearance enhancing where conditions are not optimal.
